

AY2017 Sakura Replanting Project Report

The following is a report of the 2017 Sakura Replanting Project. The location of the numbered trees can be found in the chart below. “Comprehensive diagnosis” refers to those made by tree doctors between 2009 and 2012, indicated in the lower right corner of the chart below.

1. Plan Implemented in AY2017

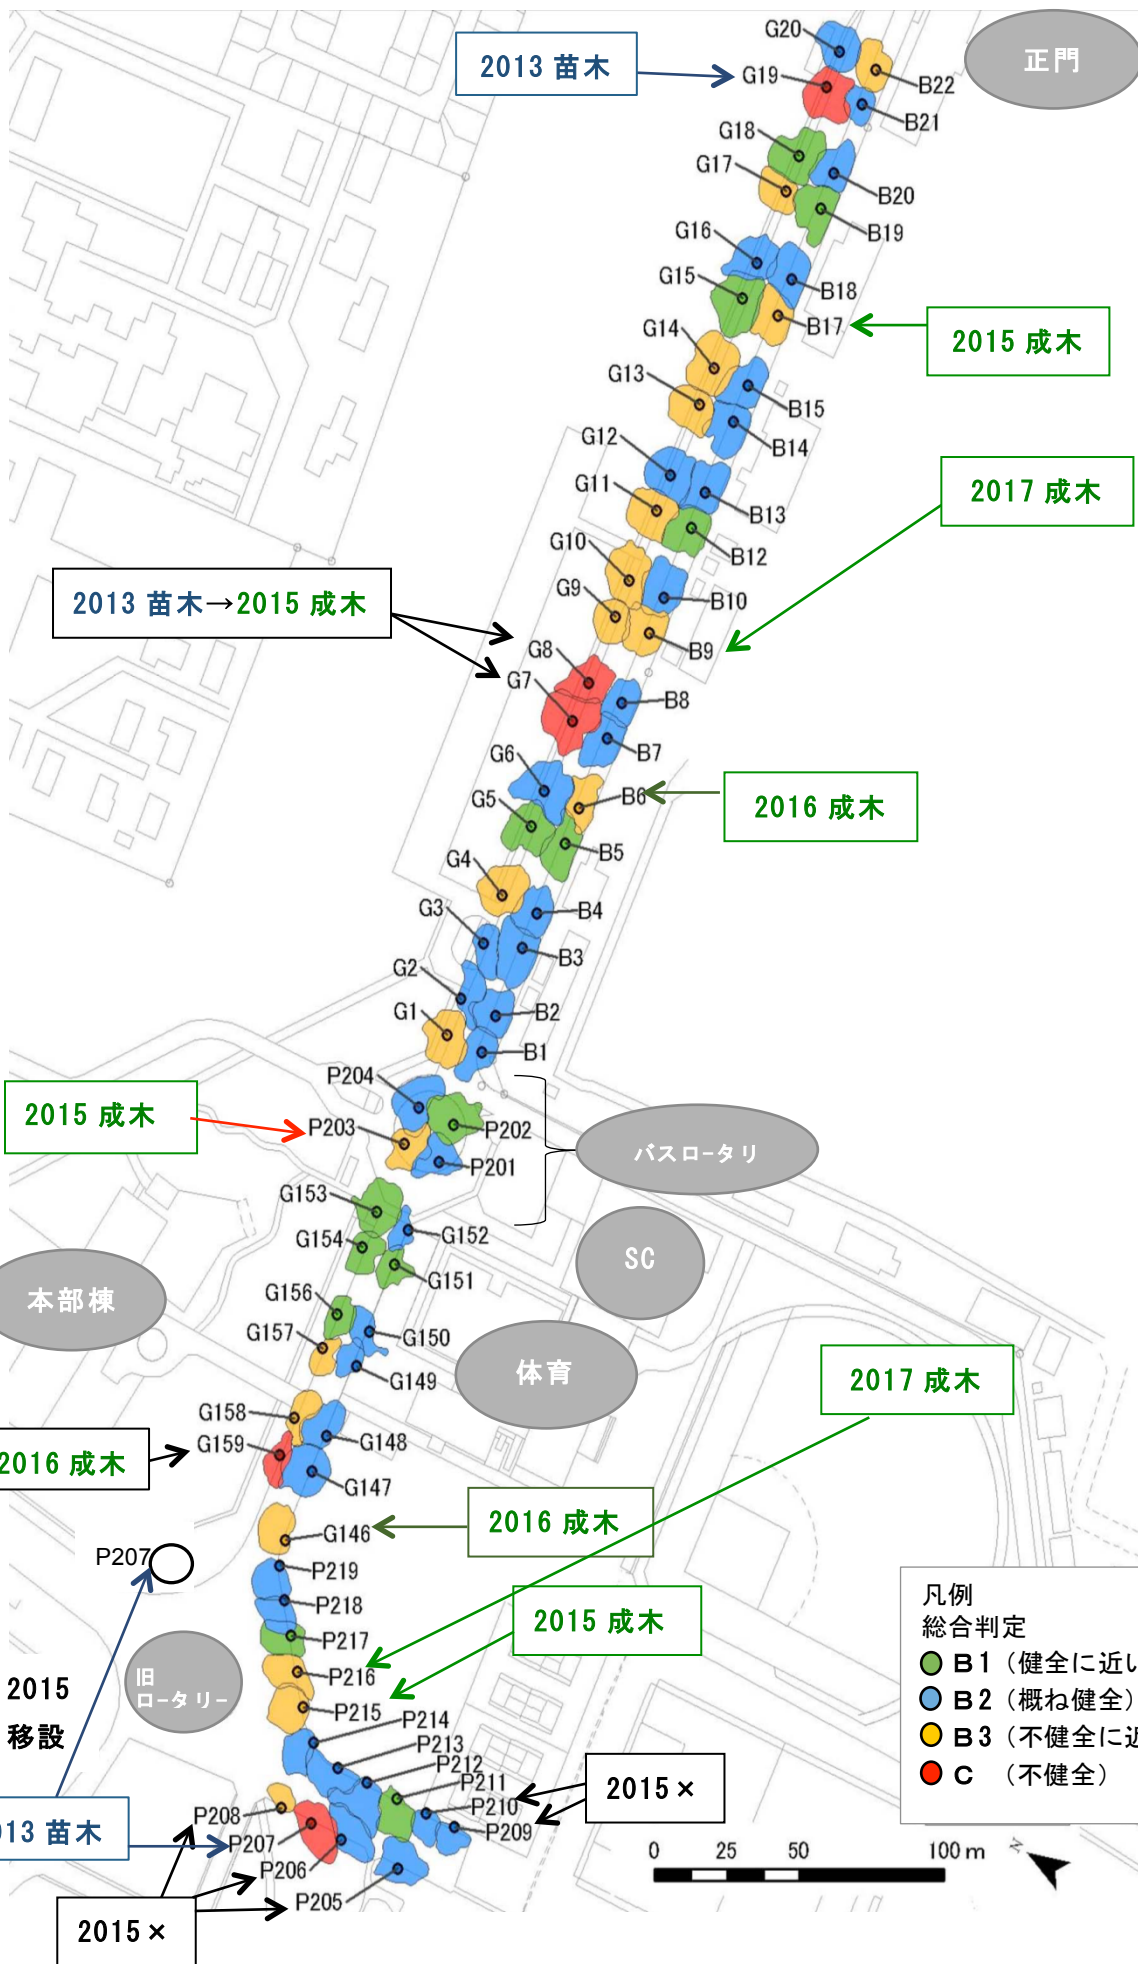

In AY2017, we felled two trees (B9, P216), diagnosed as becoming unhealthy with Fomitella Fraxinea mushrooms growing on them, and replaced them with 6-meter mature trees. The fungi are strongly pathogenic, causing butt to rot leading to the felling of the affected trees. The felled and planted trees are marked “2017 mature tree” in the chart below.

2. Costs in 2017

In 2017, we spent JPY 1,070,280 for the Project. The details are indicated below.

(Details)

Category	Fee (JPY)	Note
Felling, uprooting and planting mature trees	694,000	2 trees (JPY 378,000 per tree)
Other fees	376,280	Changing the soil, removal of surplus soil, haulage costs
